

PB Vision Integration Discussion Note #1

May 27th 2026

Written by John Kim

What PB Vision Adds to PlayCircle (Recommendation from Hanzo which John Kim agrees to but needs to strategize for specific usage and implement strict cost control)

AI video analysis

match tracking

player statistics

gameplay insights

automated highlights (All of this we need to discuss with PB vision on what the technology they offer is available for easy Data Analysis)

Should we use PB Vision (YES!)

This Strategic Shift without PB Vision is that we are a participation platform that becomes a marketplace but with PB Vision we are a participation + **player progression platform**

(The question we need to consider is what if this is just a not good spend of money? What data can we provide for free and what we can provide for a fee?)

The Hosted Sessions with PB vision becomes a “Premium Data Sessions” that is not just automated but also provides us with the label AI analysis (**AI Algorithm to match for better games**) Non-hosted sessions are cheap, scalable, social and immediately executable in many different locations. Hosted sessions are structured, recorded, analysed and performance tracked meaning these sessions become our “high-value

product". Previously we wanted the host to take the responsibilities of recording certain player's attributes. Now we can use PB vision to automate this process.

Operational Flow

During Hosted Games the Host responsibilities are

manage rotations, ensure fair gameplay, RECORD games, send collected preset dataset questions to PlayCircle Cloud for further Analysis (Player Profile Update) and have Post-Session Activities

During Hosted Games with PB Vision the Host responsibilities are

manage rotations, ensure fair gameplay, RECORD games, upload footage to PlayCircle Cloud for further PB Vision Analysis (Player Profile Update) and have Post-Session Activities

PB Vision processes has to be fully automated as soon as we tag a player's ID their Player Profile is update automatically.

So what are the performance metrics that we can include from PB Vision

Are these enough? What about simple things like Win/ Loss Ratios? Best matched Partner?

New Player Profile Layer

Basic

Name

Title

Occupation

Skill level

Performance

Win rate

Shot accuracy

Aggression score

Consistency

Match history

Social

Favorite partners

Most active courts

Most Active time

Rankings

AI Insights

Examples: We should have a preset amount of text that populates the player profil and it is done by us and not edited by the players themselves. Example Jeffri has a “Strong forehand but requires backhand consistency. He is best at defensive play.”

Engagement Loop

Now users are not just using our app to get free games they are playing better games. They strive for improving, competing, tracking progress and building identity in our App

This improves retention, stickiness and willingness to pay for our services immediately. i.e. purchase our MYR 50 or MYR 100 packages to get more credits to attend Hosted (PB vision) games

Financial Impact (VERY IMPORTANT)

This is the area we cannot decide until we can get a better understanding of potential sponsors.

Revised Hosted Session Economics

Existing hosted session cost:

Court = MYR 80

Host = MYR 100

Total = MYR 180

Add PB Vision cost

PB Vision charges:

MYR 5–15/player analysed

MYR 8/player

16 players

128/session

Revised Hosted Session Cost

Component	MYR
Courts	80
Host	100
PB Vision	128
Total	308

Cost Per Player $308 \div 16 = \text{MYR } 19.25/\text{player}$ (Almost double hosted Session for only 1 games Analysis)

Session Type	Suggested Price	Suggested Credits
Non-hosted	MYR 10	2
Hosted	MYR 20	4
PB Vision Hosted+	MYR 35–50	8

We will therefore not integrate PB Vision in every game. Instead, we will offer PB Vision an optional “premium progression layer” once you have participated in at least one free non hosted or hosted session.

Now we have 3 New Product Hierarchy where

Tier 1 — Free Discovery, beginner friendly and non-hosted and focuses on social

Tier 2 — Hosted Community, structured games with hosts data and some form of retention

Tier 3 — Competitive Analytics, with PB Vision, stats, rankings and improvement

We are hoping that Tier 3 will increase retention, increase paid conversion, increase ARPU and increase social stickiness.

Once that is achieved we can launch Leagues. These two factors are what Jeffri has asked us to build. **The MOAT**

NEW SESSION MIX ASSUMPTION

Monthly Capacity

270 sessions/month

16 players/session

4,320 player slots/month

New Proposed Mix

Session Type	% Mix	Sessions
Non-hosted	60%	162
Standard hosted	30%	81
PB Vision Hosted+	10%	27

3. COST STRUCTURE

Non-Hosted

Component	MYR
Court	80
Total/session	80
Cost/player	5.00

Standard Hosted

Component	MYR
Court	80
Host	100
Total/session	180

Cost/player 11.25

● PB Vision Hosted+ All Assumptions until we speak to them

MYR 8/player

16 players

PB Vision cost:

128/session

Total Cost

Component	MYR
-----------	-----

Court	80
-------	----

Host	100
------	-----

PB Vision	128
-----------	-----

Total/session	308
---------------	-----

Cost/player	19.25
-------------	-------

MONTHLY OPERATING COST

Session Type	Sessions	Cost/Session	Monthly Cost
Non-hosted	162	80	12,960
Hosted	81	180	14,580
PB Vision Hosted+	27	308	8,316

TOTAL MONTHLY COST

Total monthly cost	35,856
